

Reduce Downtime and Improve Operations with READYAsset

READYAsset gives facilities and plant managers the information and control needed to manage their staff and run their maintenance operations efficiently, including being proactive with machine maintenance to reduce downtime. The CMMS (Computerized Maintenance Management System) software also greatly improves how teams communicate inter-departmentally and how information flows between systems.

"As a maintenance manager, using LLumin's READYAsset suite allows me to better understand my employees' workload, to increase our service levels to the plant, and ensure minimal disruptions to operations."

READYAsset software:

- Minimizes machine, production and operations downtime by integrating with control systems and IoT-enabled assets to monitor each machine's specific state in real-time. When its expert system detects a problem, the best corrective action is executed derived from collective years of employee knowledge.
- Simplifies asset tracking, enables maintenance workflows to ensure best practices are followed
- Automates the completion of compliance and regulatory paperwork.
- Tracks, manages, and provides immediate visibility for all required resources, including parts, tools, materials and inventory.
- Monitors machines and systems in a facility in 3-dimensions
- Reduces time-consuming tasks by minimizing data entry, efficient scheduling and reduced exposure to risk.

Features:

LLumin's READYAsset automates critical assets performance management processes by supporting:

- Asset Tracking & Management
- User-defined attributes throughout the entire LLumin application suite
- Real-time monitoring of all systems and their components
- HTML 5-based, IoT-enabled, mobile and web-based design
- Expert systems- and AI-based processes to proactively determine the best corrective actions to take

With these capabilities, READYAsset eliminates the problems that diminish productivity by offering a solution that's easy to implement and use. Best of all, READYAsset is highly flexible, with a customized dashboard that mimics your employees' workflow. The result is an effective productivity tool that requires minimal training and helps your organization stay operational.
