

READYTrak: Powerful Materials Tracking, Inventory Management

READYTrak software manages every aspect of your enterprise-wide materials requirements supply chain. Our inventory, purchasing and usage tracking capabilities offer advanced functionality that is easy to use and yet includes enterprise-level traceability, transaction logging, and security.

"LLumin has helped Savage Arms reduce on-hand MRO inventory by 23% – we run a much more efficient Tool Crib."

**- Controller,
Savage Arms**

LLumin READYTrak:

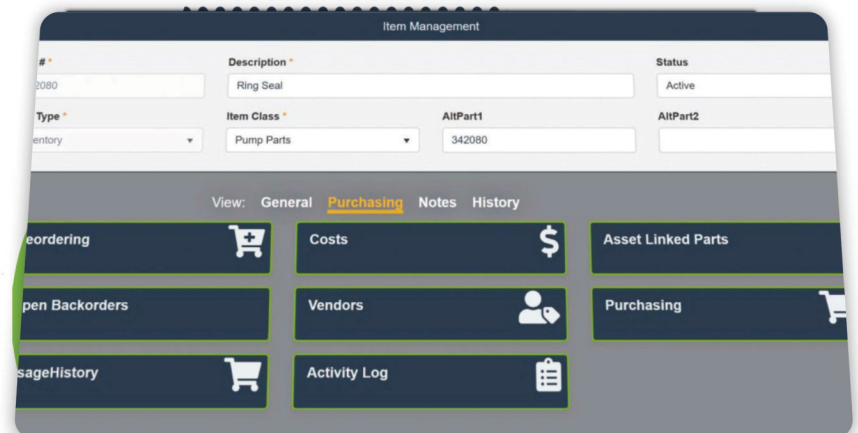

- Provides identification and monitoring of tools, chemicals, components and materials
- Tracks any type of entity and can handle serialized components, lot numbers, containers
- Provides a centralized view to manage and track hazardous materials for improved safety, and compliance with EPA, OSHA, GHS, Sarbanes-Oxley, FDA, ISO requirements.
- Automates and streamlines procurement requests and approval process
- Can be used via the web or on a mobile device
- Integrates with a variety of ERP and Financial Systems including SAP, MS Dynamics, and many others.

Using READYTrak reduces financial, legal and regulatory risks by:

- Enabling sophisticated eProcurement-based ordering, fulfillment and usage tracking.
- Accurately tracking, managing and reordering inventory, stockrooms and warehouses
- Accurately tracking and managing tools and equipment including hazardous materials and any type of inventory, component or tooling, including uniquely identified entities and fractional quantities.

LLumin's flexible and comprehensive READYTrak software is ideally suited for any application that requires full automation and management of the entire materials, procurement, and vendor relations process. This includes industrial plants, municipalities, and any type of research or higher education institution.

Inventory control is a key feature of READYTrak
